Photo Analysis of Barlock Radar

Enclosed are five preliminary drawings of component parts of the Barlock Radar which we believe will be of value to you while additional photo analysis is continuing on these and other parts of the radar. Two drawings are perspective views of the upper and lower antenna feeds, two are side view line drawings showing the angular relationship of the upper and lower antenna feeds to the focal point of their respective reflectors, and one is a drawing showing the wiring arrangement of the upper antenna feed.

The drawings are not based on a predetermined scale but on a direct proportional relationship between component parts. They are not intended as final graphics and may be changed due to further analysis.
